Prompt:
figure skater performs a triple axle with a cat on her head
Sora
DETECTION
Visual View
Language View
Evidence Aggregation:
• Frame-level artifacts detected
• Temporal inconsistency across frames
• Text–video semantic consistency violations
• Violations of real-world entities and phenomena
OUTPUT
Final Decision:
AI-Generated Video
FAKE
Representative Metrics:
Frame AUC = 0.98
Video AUC = 0.95
Temporal F1 = 0.91
Text-Video Sim = 0.34
Reasoning:
World knowledge reveals non-existent sponsor names on rink-side billboards, and the cat's motion on top of the skater's head violates basic physical laws such as gravity and balance. Together with the low text-video consistency score, indicating an AI-Generated Video.
